

The new Wang 3300 BASIC makes in-house, time-sharing systems a practical reality. And at a reasonable cost.

Designed to be expandable as needed, a complete operating system starts as low as \$14,000. On a leased basis this can mean a per terminal cost of less than \$1 per hour on a typical system. Yet, the Wang 3300 system can be expanded to a \$200,000 time-sharing installation with full peripherals.

The 3300 can handle up to 16 teletype or typewriter terminals, has an expandable core memory (4K to 64K), and uses BASIC, the most popular conversational time-sharing language. Simple, standard magnetic

tape cassettes provide compact, inexpensive secondary storage.

The Wang 3300 is a real break-through for any scientific, engineering, industrial or educational situation. It means you can now afford your own in-house time-sharing system. For a demonstration of the Wang 3300 BASIC or more information, call any one of our factory sales/service offices from coast to coast. Wang Laboratories, Inc., Dept. MDA-9, 836 North Street, Tewksbury, Mass. 01876. Tel. (617) 851-7311.
